How to Measure:

When you are ready to put Flex Pipe to use, follow these instructions for determining the length to cut the pipe. NOTE: All flexible metal tubing is measured fully extended.

Determine the length (X") of pipe needed for your application by measuring the gap between the two pipes you intend to connect.

Allow a 3" overlap for each end (add 6" to the measurement from above). This is the length (Y") of Flex Pipe needed.

Measure distance needed from the far right side inward. Wrap area to be cut with duct tape. Use a marker to draw a cut guide on the tape. Flex Pipe is now ready to be cut. Cut through the tape. Remove tape from Flex Pipe before using.

How to Order:

Determine your usage needs. Flex Pipe is sold in a variety of lengths, including precut lengths. All lengths range from 1" to 6" in diameter. Refer to the chart on the reverse side to determine your desired part number. Order by part number, not by the foot.

IMPORTANT:

When measuring and cutting, keep the open side of the Flex Pipe to your right. To determine the open end, turn the end of the pipe toward you and look for the rings to wrap on top.

How to Cut:

There are three ways to cut Flex Pipe. Select a method that suits your equipment.

CHOP SAW: For best results, use a 1/16" wide blade. Make sure the Flex Pipe has the open side facing to the right. Align and secure pipe so the cut guide lines up with the Chop Saw blade, and cut.

BAND SAW: For best results, use a no-set blade with 24/32 teeth/inch. Make sure Flex Pipe has the open side facing to the right. Align and secure pipe so the cut guide lines up with the Band Saw blade, and cut.

HACK SAW: For best results, use a no-set blade with 24/32 teeth/inch. Make sure Flex Pipe has the open side facing to the right. Align and secure pipe, and cut on the guide line.
